

Straightforward, easy to use and effective medically supervised skin care is the hallmark of the Biophora system. Biophora is formulated on the principle that technically advanced doesn't have to be a regimen of expensive and complex steps to attain healthy, toned, and more youthful looking skin.

Each Biophora product and protocol is designed to improve specific skin conditions with the speed, effectiveness and safety our medical professionals expect for you, as their patient. The simple goal is to normalize skin function to restore and maintain a younger skin appearance.

Biophora's technically advanced formulations address difficult skin conditions such as:

aging | free radical damage | fine lines | acne blackheads | whiteheads | brown spots hyperpigmentation | enlarged pores | oiliness rosacea | sensitivity | flakiness | dryness

#### ANTI-AGING STRATEGIES

As we age, and with the help of gravity, we begin to notice sagging, wrinkling,

laugh lines, etc., as the collagen and elastin fibres in our skin weaken and become less abundant. Biophora products challenge the production of collagen and elastin. They also improve the tone, texture and vitality of the skin with state-of-the-art, Alpha-hydroxy and Beta-hydroxy-acids, L-Ascorbic acid, hyaluronic acid and or lipid based moisturisers, bleaching agents and sun protection.

#### WHAT MAKES THE BIOPHORA SYSTEM SO EFFECTIVE?

Clinically advanced and natural ingredients that challenge and promote cell renewal are specifically formulated for Element Exposed|Normal, Acne|Oily, Sensitive|Dry skin types and any combination thereof. A personalized consultation with our highly trained Biophora technicians will

determine the exact protocol that will ensure the safe and effective results you require.

The Biophora system consists of a two-part program:

- \* Home care products
- \* Clinical treatments in-office, performed by a Biophora technician or a physician.

Daily use of the Biophora products will improve the texture, evenness of skin tone, reduce the appearance of fine lines as well as calm or arrest most acne conditions. Clinical treatments or Biophora Glycolic, Lactic, or Salicylic Peels performed in-office will greatly accelerate your results, as well as enhance your daily skin treatment protocol.

The accumulation of dead skin cells on the surface of the skin contributes to a dull appearance, uneven texture, bacteria formation, and in turn, most acne conditions. Biophora Peels, consisting of cosmeceutical and physical exfoliation, will allow for a more vibrant, refined texture and improved clarity of the skin.

These procedures activate cell renewal and prepare the skin to absorb products which encourage the body's own collagen production. These peels also prepare the skin to receive Biophora's active ingredients, nutrients and anti-oxidants, essential in the nourishment and healing of the skin.

#### BIOPHORA IN-OFFICE TREATMENTS

**BIOPHORA Glycolic Peel:** a 20-30 minute cosmeceutical and physical exfoliation of dead skin cells that form on the surface layer of the skin. This peel deeply cleans the skin and leaves it smooth in texture. It is available in 20%, 30%, 40% and 50% concentrations. It may be used on Element Exposed|Normal or Acne|Oily skin. The Biophora Glycolic Peel is non-invasive and requires no recovery time. Biophora SPF must be used and makeup may be applied following the peel.

**BIOPHORA Lactic Peel:** a 20-30 minute cosmeceutical and physical exfoliation of dead skin cells that form on the surface layer of the skin. This peel is specifically designed for Sensitive|Dry skin, but it is effective for Element Exposed skin as well. The Biophora Lactic Peel is non-invasive and requires no recovery time. Biophora SPF must be used and makeup may be applied following the peel.

**BIOPHORA Salicylic Peel:** a highly effective 20 minute peel targeted to exfoliate the superficial layer of dead skin cells. Available in 20% or 30% solutions, it is excellent for Acne|Oily skin types but can be used with very positive results on all skin categories. The Biophora Salicylic Peel is non-invasive and requires no recovery time. Biophora SPF must be used and makeup may be applied following the peel.

#### SCIENCE MADE SIMPLE

The skin is the largest organ of the body. It withstands tremendous exposure to elemental factors: sun, wind, and extreme temperatures, as well as the effects of internal and topical nutrient and moisture deficiency. Biophora is designed to correct as well as defend the skin from the impact of these factors. This unique system safely, but aggressively exfoliates while replacing essential nutrients.

Biophora works most effectively in conjunction with a healthy lifestyle, which includes proper sleep, nutrition, the intake of sufficient levels of high quality water, exercise, supplementation, stress management, avoidance of smoking and moderation of alcohol.

Our 100 years of combined expertise in aesthetics provides us with the most sophisticated approach to developing medically advanced skin care.

The Biophora system has been created in collaboration with cosmetic plastic surgeons, anti-aging specialists, naturopathic doctors and chemists. These state-of-the-art products and protocols are designed to make skin science understandable and skin maintenance simple for the patient.
